Waterbury, Conn. June 4, 1890

Wm. H. Wood & Co., Boston.

W.H. Cobb, Esq., Acting Supt.,

United States Mint, Philadelphia, Pa.

Dear Sir, --We have yours of the 3d enclosing samples of defective bronze coin. We shall give this matter immediate attention and see that so far as we are concerned the defects are remedied.

I have been investigating the blanks as they are coming through this morning and so far as we can discover they are entirely free from any scale, being bright and clean and are also as soft as any we have ever produced. I presume there may have been a little carelessness and we may have got in a box or two which were not quite up to standard. The defects in the samples would indicate that metal scale from an imperfect blank had got fastened to the die and caused an imperfect impression.

We shall carry out the suggestions which you make as far as possible and you can say to Chief Coiner Steel that we will see that the stock is rolled as uniform as possible to get it. We have usually had good success in this line. I have had a quantity weighed this morning as they come through and have found only one which could be classed as light: the others were all within the limit of weight. I expect to be in Phila. next week and shall take pleasure in calling, but in the meantime you may rest assured that we shall be all we can to obviate the troubles.

Yours truly,

*C. P. Goss*
